

## Attachment & Trauma - Biology and Behaviours

<b>Training Details:</b>	
Course Tagline	Learn about the biology and behaviours of children and young people who have experienced attachment difficulties or trauma.
Course Length	Half Day 2.5 hours
Course Outline/Description	This course will consider <ul style="list-style-type: none"> <li>• What happens in the brain and body when children experience problems with attachment or trauma</li> <li>• The behaviours that these students will display in the classroom</li> <li>• How these behaviours can be managed effectively</li> <li>• How whole school approaches that meet the needs of vulnerable students can have a positive impact on all students</li> </ul>
Target Audience	Any teachers, school staff or other professionals who work with children and young people. Particularly useful for designated teachers for Looked After Children, SENCOs and staff who work in inclusion or pastoral support.
Course Outcomes	By the end of the course delegates will understand the range of behaviours which may be displayed by students who have experienced trauma or attachment issues and why these behaviours occur. The latter part of the course will focus on developing strategies to manage these in the classroom and school.
